DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to a patch comprising a breathable layer, a barrier layer, and a volatile agent, classified in class 424, subclass 449.
- II. Claims 14-22, drawn to a method of delivering and making patch for release of volatile substance comprising mixing a volatile substance with a liquid agent, and the steps set forth in claim 14, classified in class 424, subclass 449.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process since the volatile substance can be applied to a breathable layer and then add the liquid agent.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
